32bit, 64bit SuperRam Free Download is an advanced system optimization tool that helps PC users lower the performance hit of their windows apps by managing their system's physical memory. SuperRam is an affordable product in this category with powerful features. Easy to use, just do a run-time check and get the optimized resource size. SuperRam was designed to boost computer performance by adjusting memory usage, either automatically or manually. The application features a professional yet easy to use interface that not only provides an important amount of information regarding computer performance, but it also enables you to take advantage of SuperRam's features quickly. Basically, the program offers three different tasks, as follows: set up the application and the way it monitors / optimizes memory, perform a speed test or access the statistics. Setting up SuperRam is easy as pie because the application displays two different sliders to adjust memory to maintain and memory to free. As for the speed test, SuperRam tries to determine the small and large memory block access speed, it tests alternating small / large memory block access speed, as well as stepped memory block access speed and, in the end, calculates the final score. Last but not least, SuperRam shows memory statistics and history, with detailed figures on total and available physical memory and page file memory. As said, the application also makes it possible to adjust memory usage manually, so it's enough to right click the program icon in the System Tray and hit the "Free memory now" option. SuperRam doesn't slow down the computer when running in the background, and it has a truly positive effect on the performance of your system whenever it takes care of the memory. All things considered, it's no doubt SuperRam is a handy tool that quietly sits in the System Tray while optimizing system memory.
